Music Technology: An Evolving Field
Joo Won Park, Music Technology, Assistant Professor

In this lecture, we will learn about the current state of computer music. The integration of computer in music has revolutionized the way we compose, perform, and listen. For example, the computer codes and mathematical models are being used in composition. New electronic instruments are used on stage to extend the limit of traditional performance practices. These technological advances in music are rapidly changing our concept and aesthetics of music.
